

# Aegis-R: MVP Boundary Definition

## What Aegis-R Does

Evaluates logical feasibility of security events.

Maintains attack progression state.

Provides explainable reasoning outputs.

## What Aegis-R Explicitly Does NOT Do

Does not automatically block or remediate threats.

Does not replace SIEM, EDR, or XDR systems.

Does not learn attack logic from telemetry.

## Why These Boundaries Exist

To preserve compliance and human accountability.

To prevent silent AI failure or overreach.
